

## THE THREAT FROM EXPLOSIVE EVENTS IN AMMUNITION STORAGE AREAS

It is now acknowledged that in almost all post-conflict environments, and in many developing countries, a physical risk exists to communities from the presence of abandoned, damaged or inappropriately stored and managed stockpiles of ammunition and explosives.

News of major ammunition depot explosions makes the headlines several times in any single year, but many minor events go unreported. All of these events though have a devastating impact on local communities. Large number of casualties, widespread destruction of infrastructure, and the disruption of the livelihood of entire communities often result. In addition to the immediate human suffering, such explosions can have major negative effects on the environment and, in States with limited means to finance the technically challenging clean-up costs, local populations, especially children, are all too often exposed to the risk of injury or death due to the unexploded ordnance<sup>1</sup> that tends to litter large areas for extended periods of time after the initial undesirable ammunition explosion.

The matrix at Annex A contains details of known or suspected explosive events within ammunition storage areas over the last ten years. The data has been obtained from a range of open sources,<sup>2</sup> and is therefore only as accurate as those relevant sources; it is certainly an under-estimation of the real impact.

Since the last report more open source data from George Zahacewsky has been added to the historical records, for which he is thanked. National authorities should be contacted for further definitive information.<sup>3</sup> The matrix is only intended to illustrate the very real risks and hazards that stockpiled ammunition can present to civilian communities.<sup>4</sup> Since 01 January 2006 incidents during the demilitarization of surplus ammunition have also been included in this summary. Incidents during use, transportation, EOD operations<sup>5</sup> or manufacture<sup>6</sup> are not included. Similarly the many explosive incidents involving the manufacture and storage of fireworks are also not included.

Some good news is that the international community is at last beginning to accept that the problems arising from the accumulation of conventional ammunition stockpiles deserve greater international interest, developmental commitment and political will. This is demonstrated by a Group of Government Experts (GGE) Report<sup>7</sup> in pursuance of a Resolution<sup>8</sup> of the UN General Assembly that recommends; 1) the education and training of national stockpile management staff; 2) the development of a set of technical

<sup>1</sup> Ammunition ejected from depot explosions is often subjected to the forces necessary to arm it, and hence UXO occurs as if dropped or fired as intended.

<sup>2</sup> NATO MSIAC, UK EIDAS, Media, Internet, GICHD Explosive Remnants of War (ERW) - Undesired Explosive Events in Ammunition Storage Areas, ISBN 2-88487-006-7, Geneva, November 2002 and SEESAC (who maintained the list until October 2007). Thanks also to George Zahacewsky of Dyncorp Limited and William Hunt of Threat Resolution Limited for alerting us of other incidents.

<sup>3</sup> There is absolutely no intention to allocate or imply blame for any of the explosive events referred to in this paper; indeed the States involved should be congratulated on their transparency in allowing lessons to be learned from these unfortunate events. The possible cause allocated is that mentioned in the source; again this should be treated with caution as only a full investigation by appropriate specialists can technically confirm the cause of the event.

<sup>4</sup> Further detailed information can be found in Targeting Ammunition, Chapters 8 and 9, Small Arms Survey, (ISBN 2-8288-0072-5), Geneva, June 2006.

<sup>5</sup> Unless directly related to an ammunition depot explosion.

<sup>6</sup> In some cases, due to lack of information, it is not clear whether the explosion was in a storage or manufacturing location. The incident has been included but commented on accordingly.

<sup>7</sup> UNGA Report A/63/182 dated 28 July 2008.

<sup>8</sup> UNGA Resolution 61/72 of 03 January 2007.

guidelines in order to assist States in improving their national stockpile management capacities; and 3) the improvement of knowledge resource management on ammunition technical issues within the United Nations system to ensure that States have ready access to appropriate technical expertise and guidance for the safe and secure storage of ammunition and the disposal of surplus stockpiles. Resolution 63/61 of the UN General Assembly (02 December 2008) welcomes the report and strongly encourages States to implement its recommendations. The very welcome diplomatic engagement of Germany and France on this issue has at last raised the international profile of this threat to an appropriate level, and work on the development of international ammunition guidelines (UN ATG) is planned to commence in Spring 2009.

The following matrix summarises the statistics to date, but it must be emphasised that these are only the known incidents, and the accuracy of data is only as good as that in the media or source reports:

YEAR	INCIDENTS	FATALITIES (KNOWN)	INJURIES (KNOWN)	REMARKS
1995 - 2000	37	412	1011	<ul style="list-style-type: none"> <li>▪ Limited data availability.</li> <li>▪ Two incidents in Brazil (1995) and Congo (2000) account for 60% of the fatalities.</li> </ul>
2001	17	80	243	
2002	17	1587	559	<ul style="list-style-type: none"> <li>▪ Lagos, Nigeria incident resulted in 1500+ fatalities.</li> </ul>
2003	24	167	357	<ul style="list-style-type: none"> <li>▪ Iraq incidents impact on 2003 statistics.</li> </ul>
2004	16	1088	1090	<ul style="list-style-type: none"> <li>▪ Unconfirmed North Korea incident accounts for 1000 of these fatalities.</li> <li>▪ Separate confirmed North Korea incident accounts for 1000 of the injuries.</li> </ul>
2005	22	159	529	
2006	20	17	128	
2007	27	189+	620+	<ul style="list-style-type: none"> <li>▪ One incident in Mozambique accounts for over 70% of fatalities.</li> </ul>
2008	22	41	337+	<ul style="list-style-type: none"> <li>▪ Gerdec, Albania accounts for a large proportion of these casualties.</li> </ul>
2009 (To Date)	2	1	1	<ul style="list-style-type: none"> <li>▪</li> </ul>
<b>TOTALS</b>	<b>204</b>	<b>4,736+</b>	<b>5,475</b>	<ul style="list-style-type: none"> <li>▪ <b>An underestimate!</b></li> </ul>
<b>MEAN (2000 - 2007)</b>	<b>21+</b>	<b>401+</b>	<b>402+</b>	<ul style="list-style-type: none"> <li>▪</li> </ul>

To put these casualties in perspective with landmine and UXO global casualties, comparison with the Landmine Monitor 2000 - 2007 data<sup>9</sup> provides an indication of this developing threat. The table below summarises the Landmine Monitor data for the last 8 years of available records (2000 - 2007):

YEAR <sup>10</sup>	FATALITIES	INJURIES	REMARKS
2007	1,401	3,939	<ul style="list-style-type: none"> <li>▪ LM 2008</li> </ul>
2006	1,367	4,296	<ul style="list-style-type: none"> <li>▪ LM 2007</li> </ul>
2005	1,743	5,348	<ul style="list-style-type: none"> <li>▪ LM 2006</li> </ul>

<sup>9</sup> Landmine Monitor 2008.

[http://www.icbl.org/lm/2008/es/landmine\\_casualties\\_and\\_survivor\\_assistance.html#Landmine/ERW/IED\\_Casualties\\_in\\_2007](http://www.icbl.org/lm/2008/es/landmine_casualties_and_survivor_assistance.html#Landmine/ERW/IED_Casualties_in_2007)

<sup>10</sup> The Landmine Monitor reference is plus one year. E.g. casualties reported for 2001 are sourced from the 2002 Landmine Monitor.

YEAR <sup>10</sup>	FATALITIES	INJURIES	REMARKS
2004 <sup>11</sup>	6521		▪ LM 2005
	<i>1,630</i>	<i>4,891</i>	▪
2003	8,067		▪ LM 2004
	<i>2,017</i>	<i>6,050</i>	▪
2002	11,700		▪ LM 2003
	<i>2,925</i>	<i>8,775</i>	▪
2001	7,987		▪ LM 2002
	<i>1,997</i>	<i>5,990</i>	▪
2000	8,000		▪ LM 2001
	<i>2,000</i>	<i>6,000</i>	▪
TOTALS	15,080	45,289	▪ Based on a 25%/75% split of fatality/injury.
MEAN	1,885	5,661	▪

This suggests, although the statistics can be misleading and may require further ratification, that the trend is for **fatalities** from undesirable ammunition **depot explosions globally to occur at a rate of 21% of those from landmines and UXO**, whereas **casualties are at only 7% of the landmine and UXO casualty rate**. This high fatality comparative percentage illustrates what just an impact the undesirable explosion within an ammunition storage area can have on local community safety and development.

<sup>11</sup> The 2005 Landmine Monitor Report and previous editions only reported casualties, and did not distinguish between fatalities and injuries in the Executive Summary of the Report. The figures below in italic estimate the number of fatalities versus injuries in the overall casualty in the ratio of 1 fatality to 3 injuries based on the 2005 - 2007 ratio.
